

## TRAILGLOW ILLUMINATED DECALS

### SPACE-AGE NEW VINYL COMES TO OFF-ROAD RACING

For anyone who races or chases in the darkness of a desert night, especially at an overnight marathon like the upcoming SCORE Baja 1000, now is good time to pay close attention. And no, we are not kidding. Thanks to a message posted on Facebook, the Dirt Sports crew just discovered one of the neatest and most useful racing innovations to come along in quite some time – illuminated number panels and decals manufactured by the forward-thinking folks at TRAILGLOW of Barstow, California. Made from their unique INERGY organic, phosphorous-based materials, TRAILGLOW founders, Paul

Lukey, and son, Paul III, have perfected an entirely new way for off-road racers and chase teams to add rugged, vibration-resistant illuminated numbers and custom sponsor logos to their overall graphics presentation. Powered by a simple 12 volt power source, these TRAILGLOW number plates are easily read by chase crews and course workers, while custom illuminated sponsor logos insure maximum media exposure throughout the night. Want more? The TRAILGLOW team has just introduced specially made battery-powered illuminated sign boards that will help drivers find their pit location much easier in the dark. **DS**

TAKEN IN THE DARKNESS OF NIGHT, THIS PHOTOGRAPH ILLUSTRATES THE ADVANTAGES OF THE TRAILGLOW SYSTEM.

DESPITE THEIR UNIQUE APPEARANCE, THESE VINYL NUMBERS CAN BE EASILY REPLACED FROM RACE TO RACE.
